

# BRINGING COOL BACK

Alpinestars' Nucleon provides perfect protection and comfort for tourers

## Alpinestars Nucleon KR-2 back protector

Alpinestars' latest back protector is aimed at adventurers and tourers who cover long distances.

The Nucleon KR-2 is made from viscoelastic memory foam with articulated panels for flexibility. But the main strength of the new back protector is its breathability, as staying cool is crucial for those who will be in the saddle all day or working hard when riding on dirt and trails.

The Nucleon has a twin waistband system to ensure a close fit, with the kidney area slimmed down and vented to boost the protector's ability to keep the rider cool. Alpinestars have also used a snap connector system that allows the protector to be fixed into a riding suit or jacket, which is more convenient than having to take it off separately.

Despite the claims of reduced weight and increased ventilation, the coverage and impact protection takes the Nucleon to the higher Level 2 standard within the CE approval test. It's available in sizes XS-XL. [www.alpinestars.com](http://www.alpinestars.com)

£99.99

The Nucleon's waistband has been slimmed down around the kidney area to help keep you cool

## HJC RPHA10+ Lorenzo III replica helmet

If the 'win on Sunday, sell on Monday' philosophy extends from bike sales to helmets then all of us will be queuing up to ensconce our bonces in one of these. Jorge Lorenzo is the form man in MotoGP now – and, just in time, stock is arriving in the UK of his 2015 replica lid. It's only a minor styling change over the old design and remains on HJC's RPHA10+ lid, which is a very comfortable and lightweight lid that seems to work well for all kinds of head shapes.

## Powerbronze Airflow screen for Yamaha R3

Yamaha are the latest firm to gatecrash the 300cc sportsbike party with the impressive YZF-R3. It's more practical than a small sportsbike has any right to be, but British company Powerbronze's job is to eke out a little more practicality from any bike. The Airflow screen is a double-bubble effort that's designed to lift the windblast higher to make the rider more comfortable. It comes in a wide range of colours, including mirror-like iridium finishes.
