Shin armour is slender to fit under trousers

These are a firm pair of boots that took some time to bed in but are now comfortable on and off the bike. Built for a narrow foot, the quality is superb and a lot better than their price suggests.

Inside there's padding similar to other TCX boots. Outside, a simple yet effective ankle twist restrictor offers serious protection. The shin armour is slender so they fit nicely under jeans.

A ventilated, non-waterproof version is also available, priced at £20 less.

Ankle twist protection is great for price

Very expensive if you look at the CE results, but get them on your feet and feel the quality. Lots of adjustment and built up inside by 20mm to give a more secure footing when riding. Gore-Tex, tough zip, supple leather and strong ankle protection.

Quality is first rate, the outer is supple leather, there's a sumptuous interior and Gore-Tex lining. The rigid ankle, heel and toe areas offer good protection, but ankle twist protection isn't as sturdy as the Lady GTX. Good all-year-round waterproof boots, a little too hot in summer for sporty use.
